

WELL COMPLETION REPORT (WCR)

Sample Demonstration Report — NWIS Structured Data Extraction

1. Well Identification

Well ID	OIL_W001	Well Name	Nexon-01
Operator	Oil India Limited	Location	Assam, India
Latitude	27.4582° N	Longitude	95.3214° E
Drilling Date	12-Aug-2026	Report Date	15-Aug-2026

2. Drilling Summary

The well was drilled to a total measured depth of **3200 m**. The principal formation encountered was **Upper Sandstone**. During the recorded interval, the average rate of penetration (ROP) was **15.4 m/hr**, with a weight on bit (WOB) of **14.2 ton**. Rotary speed was maintained at approximately **118 RPM**, while the recorded torque was **5.6 kN·m**. The mud weight during the operation was maintained at **1.22 SG**.

3. Key Drilling Parameters

The recorded drilling parameters indicate a total depth of **3200 m** in the **Upper Sandstone** formation. The average rate of penetration was **15.4 m/hr**, with a weight on bit of **14.2 ton**. The rotary speed was approximately **118 RPM**, and the observed torque was **5.6 kN·m**. The drilling fluid had a mud weight of **1.22 SG**. Based on the sample observations, the recorded interval is classified as having a **moderate risk observation**.

4. Operational Observation

Drilling performance remained stable through the reported interval. No major drilling interruption was recorded in this sample report. The information in this report is intended to demonstrate automated extraction of drilling parameters and conversion of unstructured report content into structured records for the NWIS database.

Note: This is a synthetic one-page WCR created solely for demonstration of the OCR → NLP → structured database pipeline. It does not represent an actual Oil India Limited report.
